Alkali-Sensitive: Colors that are more likely to fade early when used on highly alkaline surfaces, such as new masonry.

Interior Use Only: Colors with a low resistance to the sun's ultraviolet (UV) rays, causing them to fade.

Low Hide: Colors that are more transparent and may require multiple coats.

Historic: Colors that are historically accurate.

COLOR CHIPS AND PAINT: These color chips are produced as accurately as possible; however, actual paint colors may vary from these samples and from batch to batch. Paint colors are affected by many factors, including lighting, age, type of finish, type of surface and adjacent colors. Some colors may require more than one coat for complete coverage. If final color appearance and color matches are critical, paint should be sampled on the actual surface before full application. Application of the paint constitutes acceptance of the color. Dunn-Edwards assumes no responsibility for color after application.

PHOTOGRAPHS: Paint colors depicted in the photographs in this brochure appear differently than on actual surfaces. Photographic processes and lighting will alter appearance.
